Daniel Conti

Rochester Hills, MI | +1 (248) 550-5049 | danielgconti@icloud.com | GitHub | LinkedIn | Portfolio

Education

Michigan State University East Lansing, MI
B.S. in Computer Science, Minor in Business Expected Graduation: Fall 2026

Relevant Coursework: Data Structures & Algorithms, Web Application Architecture & Development, Database Systems, Machine Learning, Artificial Intelligence, Computer Architecture

Skills

Languages: Python, C++, Java, JavaScript, TypeScript, SQL
Frameworks/Libraries: React, Angular, Node.js, Express, Flask, PyTorch
Tools/Platforms: GCP, AWS, Azure, Firebase, Docker, MongoDB, MySQL, Git, Nginx

Experience

Amazon Web Services - Software Developer Intern | *New York, NY* May 2024 – August 2024

- Developed the backend for a natural language interface for AWS Glue, allowing users to generate data migration jobs from natural language prompts, reducing job creation time by 80% on average.
- Generated 1,000+ synthetic data points using an AWS Bedrock model, achieving ~95% validation accuracy and informing model iteration decisions.

Michigan State University - Capstone - Software Developer | *East Lansing, MI* August 2026 – Present

- Collaborated with Delta Dental to develop insurance rate visualizer using Angular and Java.
- Built interactive insurance calculation graphs using Cytoscape and stored data in MongoDB.
- Integrated an Azure-based conversational AI interface with session context to answer questions

Cooper Standard - Sales Intern | *Northville, MI* July 2026 – Present

- Developed a customer-facing supplier portal prototype using HTML, CSS, and JavaScript, translating requirements from Sales, IT, and Purchasing into a functional web application presented to upper management and greenlit for production.

Projects

PrepPath - Co-Founder & Sole Engineer June 2025 – Present

React, TypeScript, Node.js/Express, Firebase, OpenAI, Gemini, Google Cloud TTS, Stripe, Supabase, Twilio

- Built and scaled an AI interview platform to 850+ users and 3,200+ mock interviews, including deployment through Purdue University's MGMT 295 course serving 600+ students.
- Architected the full-stack platform with LLM integration, rubric-based evaluation, parallelized grading, real-time voice interviews, and resume PDF/OCR processing.
- Engineered production infrastructure with Firestore security rules, encryption, Stripe webhooks, AI fallbacks, caching, and database indexing to improve reliability, security, and performance.

HandSignBattle - Sole Engineer June 2026

React, TypeScript, Flask, Socket.IO, MySQL, Docker, WebRTC

- Built and deployed a real-time multiplayer browser game where webcam hand gestures drive gameplay using server-authoritative game logic and peer-to-peer WebRTC video.
- Trained an 8-class gesture classifier on a hand-labeled 925-image dataset, achieving 97.8% accuracy with ResNet18 and 93.7% with a landmark MLP while reducing model latency by ~300× and model size by ~450×.
