Daniel Conti

Rochester Hills, MI | +1 (248) 550-5049 | danielgconti@icloud.com | GitHub | LinkedIn | Portfolio

Education

Michigan State University East Lansing, MI
B.S. in Computer Science, Minor in Business Expected Graduation: December 2026

Relevant Coursework: Data Structures & Algorithms, Databases, Web Development, Machine Learning, AI

Skills

Languages: Python, C++, Java, JavaScript, TypeScript, SQL
Frameworks/Libraries: React, Angular, Vue, Node.js, Express, Fastify, Flask, PyTorch
Tools/Platforms: PostgreSQL, Redis, MongoDB, Docker, AWS (S3, SQS, Bedrock), Azure, Supabase, Stripe, Git

Experience

Cooper Standard - Sales Intern | *Northville, MI* July 2026 – Present

- Built a customer-facing supplier portal prototype (HTML, CSS, JavaScript) from Sales, IT, and Purchasing requirements; presented it to upper management and it was greenlit for production.
- Identified $8M+ in unforecasted revenue, raising revenue projections to match real-world data.

Amazon Web Services - Software Developer Intern | *New York, New York* May 2024 – August 2024

- Developed the Python backend for an AWS Glue natural language interface (RAG, in-context learning, prompt engineering) that generates data migration jobs from prompts, cutting job creation time by 80%.
- Generated 300+ synthetic data points using an AWS Bedrock model, achieving ~95% validation accuracy, and scored generated job DAGs against them with NetworkX to guide model iteration.

Lear Corporation - Software Engineering Intern | *Southfield, MI* June 2023 – August 2023

- Built a full-stack shop-floor login page (ASP.NET, Vue) that verifies employees against the company database and protects accounts with end-to-end RSA encryption; deployed to 100+ employees.
- Built a web app (HTML, CSS, JavaScript) that helps engineers create and deploy vehicle simulations.

Projects

PrepPath - Co-Founder & Lead Engineer | preppath.online June 2025 – Present

React, TypeScript, Node.js/Express, PostgreSQL (Supabase), OpenAI, Google Cloud TTS, Stripe, Cloudflare

- Built and launched an AI voice mock-interview platform with 850+ users and 3,200+ interviews; Purdue University's MGMT 295 adopted it for 600+ students via a class assignment and grading system I built.
- Designed real-time voice interviews (Web Speech API, Google Cloud TTS with audio prefetching) and a backend LLM proxy that routes requests to models by token budget.
- Migrated auth, data, and video storage from Firebase to Supabase Postgres with 100+ row-level security policies and functions, verified with 80+ end-to-end checks and no frontend function signature changes.
- Built Stripe billing (idempotent webhooks, race-safe credit gate) plus AES-256 encryption and rate limiting.

Delta Dental Capstone (MSU) - Software Developer August 2026 – Present

Angular, Java, MongoDB, Cytoscape, Azure AI

- Building an insurance rate visualizer with Delta Dental, including interactive insurance calculation graphs.
- Integrated an Azure conversational AI assistant that keeps session context across questions.

Conveyor - Sole Engineer | GitHub October 2026

TypeScript, Fastify, PostgreSQL (Prisma), BullMQ/Redis, Amazon SQS, S3, Docker, React

- Built an async job platform that runs any Docker image in a sandboxed, resource-limited container (no network, non-root) behind a queue-backed API, with a React dashboard.
- Made jobs survive duplicate delivery and worker crashes with atomic Postgres claims, heartbeats with a reaper, and backoff retries, timeouts, and cancellation; covered by 37 Vitest tests.

HandSignBattle - Sole Engineer June 2026

React, TypeScript, Flask, Socket.IO, WebRTC, PyTorch, ONNX Runtime Web, MediaPipe, Docker

- Built a real-time multiplayer browser game where webcam hand signs cast attacks, classified in-browser (MediaPipe, ONNX Runtime) so no video leaves the device; the server owns health and mana.
- Trained an 8-class gesture classifier on a hand-labeled 925-image dataset, achieving 97.8% accuracy with ResNet18 and 93.7% with a landmark MLP while cutting latency ~300× and model size ~450×.
